How Healthy are New Hampshire's Lakes?

Webinar Presented by NH LAKES and New Hampshire Department of Environmental Services

Concord, N.H., July 20, 2020 – Join NH LAKES and the New Hampshire Department of Environmental Services on Wednesday, July 22, at 7:00 p.m., for the webinar “How Healthy are New Hampshire’s Lakes?”

New Hampshire is home to nearly 1,000 lakes and ponds. While our state boasts some of the cleanest and healthiest lakes in the country, ever wonder just how healthy they really are? Tune and in and hear from biologists with the New Hampshire Department of Environmental Services about how lake health is monitored and what the data tells us about water quality trends. You’ll also find out how you can help monitor the health of our lakes and ponds!

Presented by Kirsten Nelson, Aquatic Ecologist, New Hampshire Department of Environmental Services, and Dave Neils, Chief Aquatic Biologist, New Hampshire Department of Environmental Services.

This webinar is part of the Working for Clean & Healthy Lakes webinar series. “We’re extremely thankful to our partners and the experts who have helped us provide these informational webinars to the public during a time when in person workshops aren’t an option,” said Andrea LaMoreaux, NH LAKES Vice President of Programs and Operations.

The webinars are FREE, but pre-registration is required, and space is limited. Past webinars are available for viewing on the NH LAKES website. Visit nhlakes.org/healthy-lakes-webinar to learn more and sign up!

Established in 1992, the mission of NH LAKES, a statewide, member supported nonprofit organization, is to ensure that New Hampshire’s 1,000 lakes are clean and healthy, now and in the future. NH LAKES works with partners, promotes clean water policies and responsible use, and inspires the public to care for our lakes.
